

Data Migration

Current IIS system - New IIS

Objective

- Collect data from current IIS
- Data Transformation
- Transfer data
- Check

Be aware

- The new IIS requires data that does not exist in the current system
- The data in the new IIS are linked in different way than the current system
- Data quality is an important issue in the migration process

Description of the problem

- Produce a comparison of the data with the existing IIS and the data required in the new IIS for each business process
- Identify data that do not exist in the current IIS which will be required for data migration
- Define a data relation between the current and new IIS
- In cases where the new data structure and old data structure are different, define the required transformation and possible additional sources for updating
